† Cars not using a dry sump system can remove 10 lbs.

†† Minimum front axle weight is calculated using the target rear weight percentage and the base weight. The minimum front axle weight must be adjusted according to the weight additions mandated and weight exceptions claimed by the team. Teams with questions regarding their official weights should check reference book located at the official scales.

\* Denotes cars with VTS in Draft form that are approved to race. Changes may be made on an accelerated basis until the VTS is finalized. When the VTS is finalized, the asterisk will be removed from Appendix A.
