Decision Date:

Specification Change

1. Vehicle:

2. VTS / Appendix A Section:

3. Requested Specification:

Decision

The request is approved. The current rules and VTS sheet specify that the battery must be in the stock location or within the rollcage structure; basically limiting any relocation to the driver compartment. This change will allow teams to move their battery away from the driver but still affords the protection offered by the car's front chassis structure which was the standard location for the factory RSR car. This change will be reflected in version 2 of the VTS sheet.
