**Date:** May 12, 2009  
**Regarding:** GT Appendix A Change

---

Effective Immediately

### GT

#### **Volvo S60**

Minimum front axle weight is now 1943 lbs (was 1800 lbs), and maximum rear axle percentage is now 42% (was 40%).

This change is being made in recognition of the Volvo carrying the heaviest load on their front tires. The new front axle weight is consistent with the actual axle weights measured earlier this season.
